

DETERGENTE PULITORE FUGHE

Specific cleaner for cleaning for tile joints

DESCRIPTION:

DETERGENTE PULITORE FUGHE it is a degreasing detergent that is particularly effective against dirt, even very old ones, which remain encrusted inside the joints and in the joints of floors and tiled surfaces. The alkaline formulation of the product also makes it ideal for application on the most acid-sensitive surfaces such as marble, travertine, limestone, polished natural stones, where it is able to effectively remove the most stubborn dirt without attacking and ruining the joints.

BENEFITS:

- Excellent cleaning power
- Formulated for tile joints
- Concentrated formula

SUITABLE FOR:

DETERGENTE PULITORE FUGHE can be used for all surfaces that are resistant to alkalines: terracotta, marble, travertine, limestone, slate, granite, natural stone, porcelain stoneware, ceramics, tuff, porphyry

APPLICATION TOOLS:

APPLICATION:

Dilute the product with 50% water, and proceed with cleaning using traditional methods: with a rag or mop, work the surface for a few minutes, so that the product can act on the dirt. This operation can also be carried out using a single-disk machine, equipped with a more or less abrasive pad depending on the type of dirt. If necessary, concentrate the action on the joints also using special tools.

After brushing the surface for a few minutes, remove the washing residues and finally rinse well with water. This operation can also be carried out using a wet vacuum cleaner

If light residues of dirt are still visible at the end of the wash, repeat the operation. In case of extremely resistant dirt, use the product in a lower dilution or directly pure.

PRECAUTIONS:

Carry out a preventive test to verify the compatibility of the product for the intended use. Protect the areas you do not intend to treat. Rinse very carefully, removing all residues.

PHYSICAL-TECHNICAL DATA:

Formula	Liquid
Color	Dark yellow
Odor	Scented
pH	12.5 ± 0.5
Biodegradability	1030 ± 10 g/l
Specific Gravity (20°C)	> 90%

STORAGE: Keep containers tightly closed and in a cool, dry place.

STORAGE PERIOD: 36 months in the original sealed packaging and stored in a cool, dry place.

PACKAGING: 500 ml bottles

ACCIDENTAL SPILLAGE: For any leaks and spills it is good practice to limit the affected area, try to recover as much as possible and reuse. Rinse the surface well.
